

Meet iRingg: Create Unique Ringtones And Push Into iPhone in One-Click

There are more than 1,000,000,000 iPhones around the globe. Yet there is no easy way to transfer custom ringtones to any of them. For years, personalized ringtones have been overlooked in all Apple devices. But what if you could easily create, edit and push tones into your device? It's time to add 'YOU' to your ringtone. Introducing iRingg.

What is iRingg?

iRingg is a 2-in-1 app that lets you create unique ringtones and push them into iPhone in one-click. Transferring ringtones without iTunes is not the only thing which makes it stand out...

...Using  data-learning algorithm (we called it 6Sense), iRingg will suggest new tracks that you can easily turn into ringtones. It's all based on your music taste.

Launch Notes:

- Product: iRingg
 - Available: March 29, 2018
 - Single License - \$19.95
 - [Download iRingg for Mac](#)
 - [Download iRingg for Windows](#)
 - [iRingg Website](#)
 - [iRingg Store](#)
 - Icons, Screenshots, Videos, & Graphics are available down the page.
 - If you're a member of the press & would like a free license for iRingg – please email josh@softorino.com
-

Create & transfer ringtones in 3 steps:

1. Launch iRingg and Choose the desired track (Try 6-sense, search online or drag n' drop from your hard drive)
2. Trim it and customize your ringtone with voice and effects.
3. Click on "Push to iPhone" and you're all set!

After the transfer is complete, you will find the ringtone on your iPhone in "Settings" > "Tones".

What pain does iRingg solve?

Ever tried to put custom ringtones on iPhone via iTunes? It's confusing and obnoxious. And after the latest iTunes 12.7 update – you can't even browse your ringtones on a desktop. Last but no least, iTunes does not allow .m4r ringtones that exceed 30 seconds duration.

iRingg eliminates all these barriers. Here's why it stands out:

- iRingg is one of its kind. It's the first solution ever to do both: create – and transfer tones onto your iPhone.
 - For ringtones, there's no easier way to take a piece of music from your iTunes library, or to rip it from YouTube or SoundCloud, than iRingg.
 - Quickly create a ringtone and push it wirelessly to your iPhone.
 - iRingg is more than utility software. It uses powerful data-analysis algorithms to learn your music tastes.
 - Each 'ringg' is unique. There will be no one else in the world with the same ringtone as you.
 - iRingg is the culmination of all technologies that we built over the past few years. It includes: aWiFi, SAC, UCB, 6Sense & SndMoji.
-

So... What's the story behind iRingg?

For years, custom ringtones have been neglected by Apple. As indie developers, we addressed this in our apps SYC 2 and WALTR 2. But neither of them could do both: create and push ringtone into iPhone. That's when the idea behind iRingg was born.

iRingg is a thought-through, all-in-one solution. It knows exactly what your music tastes are, you can add SndMojj + voice and send to an Apple device bypassing the bloated iTunes. We truly believe in iRingg. It's intelligent but simple. It has sophisticated design but stays intuitive.

Pricing & Availability

iRingg for Mac & Windows includes a free 24-hour trial with no limitations. Users can purchase lifetime license for \$19.95 (USD).

System Requirements

iRingg requires MacOS 10.11/Windows 10 or newer. All Apple iPhones starting from iOS 5 are fully supported.
